**W18JY1 Essential Oils for Respiratory Wellness**

Essential oils have been used for millennia in the treatment of various disorders and health and wellness treatment strategies. Much like the jing in the human body, a plant's jing or Essential oil is produced via specified glands and ducts within the body of the plants. Essential oils intrinsically constitute very powerful healing agents. As such, the olfactory sense lends itself to the quick introduction of therapeutics to the body. Essential oils have played a big role in the treatment of respiratory conditions, most importantly, respiratory conditions.

In this one-day class, Jeffrey Yuen will highlight the major qualities and therapeutic applications of essential oils for the treatment of a host of respiratory conditions. Topics covered will include basic theory, treatment strategies, specific oils and formulas, and treatment strategies for respiratory wellness.
